

Focus

on facilities

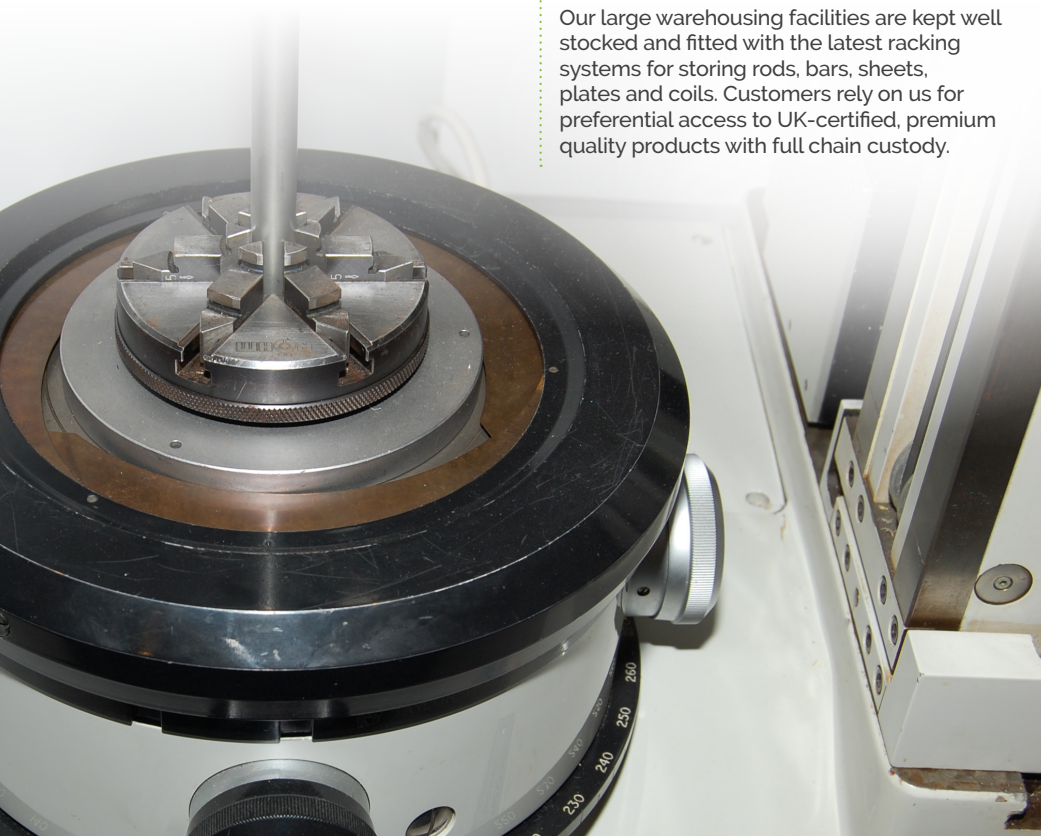

Introduction

When demand for high spec metals outstrips supply, organisations need providers who can offer reliable access to quality materials. These materials often need to be delivered precision-machined to net shapes and ready to use.

With a strong, fully certified supply chain, extensive warehousing and modern, comprehensively appointed workshop, we are well equipped for all these operational challenges.

Stock and warehousing

Our large warehousing facilities are kept well stocked and fitted with the latest racking systems for storing rods, bars, sheets, plates and coils. Customers rely on us for preferential access to UK-certified, premium quality products with full chain custody.

Workshop and machining

We have purpose-built facilities centred around a fully equipped workshop designed to address almost any request:

- > CNC Protturn RLX 1630 lathe for high precision rod and bar processing
- > Saws to cut bars, plate and billets from Ø 2mm to Ø 270mm
- > Guillotines for sheet and coil
- > Grinding machinery
- > De-coiler to check for imperfections before shipping
- > Coil handling equipment to inspect product before dispatch
- > Water jet and laser cutting
- > Heat treatments

Technical lab

We also offer access to sophisticated metrology lab equipment that helps to predict product performance and check tolerance levels, including:

- > Surface roughness testing apparatus
- > Straightness and roundness testing apparatus

The equipment also enhances our quality control procedures and provides greater safeguards for all customers.

Knowledge and advice

Our facilities are empowered by a highly experienced team. With a unique blend of specialist metallurgy knowledge and technical expertise, we help customers save time, effort and cost by ensuring that all materials are sourced, processed and tested to perform in the most effective way.

About Nicofe

Nicofe is one of Europe's leading suppliers of premium quality refractory metals and alloys, soft magnetic alloys, and controlled expansion alloys. Our customers benefit from a diverse range of capabilities that help them address their needs more effectively, especially in the aerospace, defence, electronics and automotive sectors.

With top accreditations, comprehensive workshop facilities, and a deep technical understanding we help our customers get the most out of their materials.
